

# ***Bull Hooker/Coyote Hooker Instructions***

## **Bull Hooker® Cow Call**

The Bull Hooker® produces all the cow and calf sounds. It's easy to use and the protected reed will not hang up.

Instructions: Hold Bull Hooker in your hand with your thumb on the rubber bulb. Press the rubber bulb. Take a deep breath, now blow. As you blow, release the pressure of the thumb. For short calls, release quickly. For longer calls, release pressure more slowly. For longer up-and-down sounds, increase and decrease pressure of the thumb.

## **Coyote Hooker® Predator Call**

The Coyote Hooker® immitates howls, barks, pup yelps and pup distress sounds, as well as low and high-pitch squalls. It's easy to use and needs no adjustments.

Instructions: Hold the Coyote Hooker in your hand with your thumb on the black bulb. Press the rubber bulb with your thumb and take a deep breath. Blow into the call.

For barks, release your thumb pressure quickly. For longer sounds, add and release thumb pressure at will. For predator or rabbit squalls, just blow through the call with no pressure.
